Professional Summary

Entry-level Software Engineer with hands-on experience building scalable RESTful services, microservices-aligned backend modules, SQL-backed data models, and dynamic user interfaces using Java, Node.js, TypeScript, and Angular. Strong foundation in DSA, OOP, debugging, and API reliability.

Technical Skills

Languages & Core: Java, TypeScript, Node.js, Python, SQL, RESTful services, Microservices
Frameworks and APIs: Angular, Express.js, Flask, Rasa, TensorFlow, JWT auth, Webhooks
Databases and Cloud: PostgreSQL, MongoDB, SQLite, AWS fundamentals
Dev Tools: Git, GitHub, Linux, Docker, CI/CD pipelines, Unit testing
CS Fundamentals: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Internship Experience

Software Engineering Trainee, YuvaIntern Feb 2026 – Apr 2026

- Developed the Advanced Subscription Manager, a full-stack Flask application for managing recurring subscriptions with a custom dashboard, analytics API, and forecasting projections.
- Implemented secure authentication with bcrypt, per-user data isolation, and smart filters for due-risk status and billing cycles.
- Engineered automated tests using pytest and executed performance benchmarks evaluating response times, throughput, and system resource utilization.
- Planned end-to-end deployment workflows, including release, monitoring, and rollback strategies.

Android Development Intern, Skillbit Technologies Jun 2025 – Jul 2025

- Supported backend API integration with Android modules and collaborated with senior engineers to resolve 15+ defects, improving stability and release confidence.

Web Developer Intern, CodSoft Jul 2024 – Aug 2024

- Built 3 responsive web applications, integrated third-party APIs, and improved frontend performance by approximately 20% through optimization.

Projects

NGO-Connect AI (Backend-Heavy Full-Stack Platform) 2025 – 2026

Node.js, Express, PostgreSQL, React, JWT, Gemini API

- Engineered backend services with 149 RESTful endpoints across auth, campaigns, donations, volunteering, messaging, admin, and innovation modules with role-based authorization.
- Implemented 8 AI endpoints for recommendations, campaign classification, proposal drafting, fraud scoring, forecasting, support chat, and volunteer matching, improving platform engagement through personalized workflows.
- Designed a normalized PostgreSQL model with 35 tables and built webhook reliability features (dead-letter queue, replay worker, metrics/export, cleanup), validated via a 35-step smoke suite (21.69 ms avg, 72 ms p90).

Advanced Chatbot (AI Conversational Agent) 2026

Python, Rasa, TensorFlow, NLU

- Engineered a Rasa-based conversational AI system utilizing TensorFlow and NLU, implementing 15+ custom actions and validated training data to support complex user dialogue flows.
- Improved intent recognition accuracy by over 30% and enhanced overall response quality by introducing reusable action logic, reducing future maintenance overhead by approximately 25%.

Backend Financial Workflow System 2025

Java, SQL, REST APIs, Git

- Built Java backend modules and RESTful services for transactional financial workflows with modular, microservices-friendly design practices.
- Contributed to debugging, unit testing, code reviews, and CI pipeline workflows to improve production readiness and secure coding quality.

Education

B.Tech in Computer Science and Engineering, CMR University, Bengaluru 2026

CGPA: 7.81/10

Higher Secondary Education, Kamla High School 2020

Percentage: 71.20%

Certifications and Achievements

- NCAT Exam (Naukri, 2025) – All India Rank 6423
- Software Engineering Trainee Certificate of Completion – YuvaIntern (2026)
- Web Development Projects Certification – CodSoft
- JITHACK'24 Hackathon – Travel Booking Website Project
